Spotlight on KLIiK denmark

WestGroupe adds new styles to its KLIiK denmark collection. Specifically designed for those who need a narrow fit, these optical frames combine interesting colors and a minimalistic aesthetic. Style 691 features a thin metal profile with a twist on the classic square shape and a pop of color along the top of the frame. Offering a subtle uplifted CatEye shape, style 689 features stainless steel temples and structurally placed gaps in the top corners of the frame. A universal bridge fit defines style 686, which consists of unique design details such as a thin architecturally placed stainless steel piece that flows from the temples through the frame front.
