- 4. MODO Paper-Thin Rimless 4611D.
- 5. KLIK denmark K-690 by WestGroupe.
- 6. Roveri Eyewear CLM-7 from The Hive Studio.

TITANIUM IS LIKE A MAGIC METAL.

Known for its low density and high strength, this lustrous transition metal is also ultra-lightweight.

And it gets even better: titanium is also extremely durable and corrosion-resistant.

All of these characteristics make titanium, named after the Titans of Greek mythology, ideal for creating durable and strong yet light-weight eyewear.

Glasses made from titanium also retain their colours longer than eyewear created

from other materials and they're able to withstand considerable wear and tear. Titanium glasses also scream sleek and stylish.

Some optical companies have used the strength and durability of titanium or beta titanium to create minimalist glasses as well as rimless or semi-rimless specs.

Here are some of our favourite frames, made of either titanium or beta titanium. **OP**
